Battery plug to be disconnected during storage and charging

Due to safety reasons it is necessary to disconnect the battery plug from the machine during storage and charging. The machine is unsupervised during these two states and must be de-energized mandatorily.

In order that the operator does not forget about it, a sticker which is showing the plug and referring to the user manual has been placed above the disconnecting plug. In the manual it is stressed out again in which situation the machine must be de-energized mandatorily.

Please advise our customers to follow this instruction.

Other machines without cutoff relay (TASKI swingo 455B – 1255B) will also be equipped with this sticker in the near future. No newsletter will be released for the other machine types.

| Description | Material number | Remarks |
|--------------------------|--------------------|-----------------------|
| Label disconnecting plug | 4132863 (17422-26) | New spare part number |
