New Firmware Version 3.35

Our supplier is facing difficulties in sourcing of electronic components. The global production is not covering the current demand of the markets.

Due to this situation our electronic supplier was forced to move to alternative electronic components and as a consequence of this situation, an adjustment of the firmware becomes necessary.

The new firmware Version 3.35 contains all the previous modifications in it and is backward compatible. It can be used for all TASKI swingo XP electronic boards (old & new).

Service

We recommend equipping all machines with the new firmware during the next service intervention.

The new firmware is available for download on the e-spares online platform.

⚠ CAUTION

It has to be paid attention that the connection between the machine and the laptop / PC will not be interrupted during the downloading process. If this happens the electronic has to be exchanged.

Production

TASKI swingo XP
