TASKI swingo XP / Torsion Spring

After extensive search for a suitable supplier and tests we are in the position to deliver a torsion spring which is fulfilling our demands.

The surface of the new torsion spring has been treated with a special method, which avoids that the spring is cracking at an early stage.

With our internal tests more than 100'000 movements have been accomplished, which is more than twice as much as the live expectation of the existing spring was.

Service

The new torsion spring is available under the existing material number **18602-29 (4126969)**

Production

TASKI swingo XP

as of machine number 2899
