## TASKI swingo 2500 / 3500

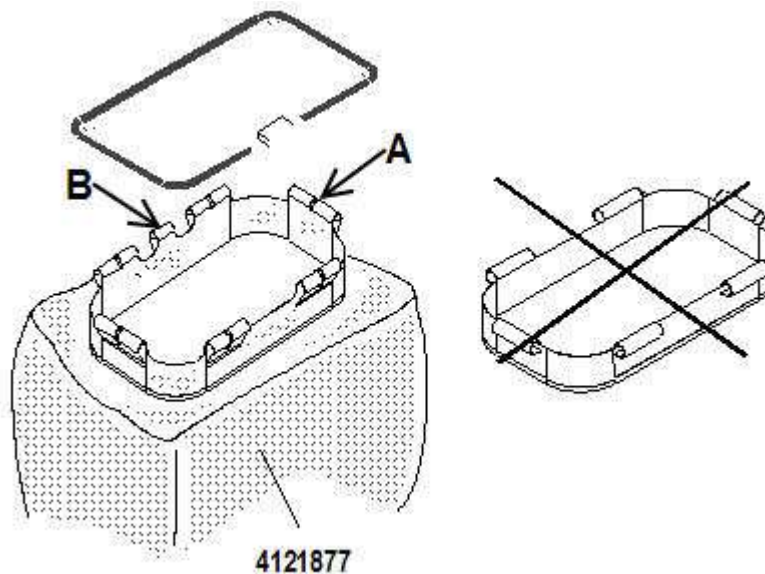

## Subassembly: Tank

### Freshwater-tank 4121877 (19600-43)

Based on field information, the freshwatertank has been analysed by the Technical Center and they have taken measures to increase its life expectancy.

#### As a result the following design changes were made:

- The fixation loops on the bag are wider and larger in diameter
- The single loops are divided into two parts (A) and therefore easier to assemble
- The loops are longer and therefore the strain is reduced
- An additional loop (B) reduces the risk for of mounting the freshwater tank the wrong way round
- The bag material is now PUR soltane blue
- The characteristics and durability are the same as the old bag (Polyether PUR)
- The water volume remains at 95 liter

### Service

- Daily maintenance (regular cleaning) increases the life expectancy of the freshwater tank
- The order-No.4121877 (19600-43) remains the same

### Production

TASKI swingo 2500/3500 with new freshwatertank

from machine-No. xxxxxxxx6473
