Excellent Cleaning Performance

High brush pressure and a sideways off-set brush unit, (especially in 1600 and 1800 model), deliver an excellent cleaning performance and allow edge-close cleaning along walls and even under over hanging furniture such as chiller cabinets.

Ease of Use

A compact design which is achieved by using a membrane tank, results in a clear line of sight when in use. The simple controls panel, with a reduced number of electronic functions, makes operator training easy and efficient.

Customer Specific Options

A number of options allow adaptation of the machine specifically to your needs. The machine is available in three working widths and can be equipped with a number of additional features, such as, impact protection bars, air reverse (for easier tank draining), water recycling system, emergency stop button, and various wheel configurations.

Robustness and Reliability

Highly durable machine with mechanically operated brush and squeegee lifting ensures robustness and increased reliability. Galvanized steel parts maximize resistance and increase durability.

Technical Data

Theoretical Performance	37,600 Sq. Ft.
Working width	28 Inches
Squeegee width	39 Inches
Solution tank	22.5 Gallons
Recovery tank	22.5 Gallons
Rated voltage	24 V
Machine weight (with Batteries)	450 Lbs.
Dimensions (L x B x H)	61 x 30 x 39 Inches
Vacuum	59 Inches
Air Flow	74 CFM
