### Performance

The patented brush design follows the floor profile and delivers nearly even pressure allocation along the full working width. This results in excellent soil removal. The U-shaped squeegee allows excellent water pick-up along the full working width. Special squeegee blades and a direct suction design allow pick-up of small debris (e.g. cigarette butts) without clogging.

### Ergonomics

The ergonomic handle suits all operators. All functions of the machine can be operated from the working position. The dashboard is self explanatory with minimum training needed and displays all required information.

### Maintenance

Color coded maintenance points increase efficiency and reduce the need for training. Fewer parts to maintain and easy accessibility make the machine extremely service friendly.

### Productivity and Maneuverability

A bigger tank capacity results in less fill stops and therefore increases productivity. The dual axle system ensures easy handling and allows excellent maneuverability in confined areas as well as easy transportation.
