

TSS Bulletin

03-07-2013 Issue 36

Purpose – To differentiate which Emergency Stop Bloc to use with the I-Drive control boards and the Curtis control boards. While both E-Stop blocks look almost identical, the internal switching of each block are opposites. Therefore if the wrong E-Stop block is installed with a particular control board, they will not work correctly. Both controllers are used on NSS Wrangler and NSS Charger models, depending on the design, so you have to be careful when choosing which Emergency Stop Block to use.

I-Drive Control Board (164-7403) and Emergency Stop Block (164-7412, **Green Button**)

Curtis Control Board (164-0070) and Emergency Stop Block (164-2025, **Red Button**)
